Condition codes refer to the information about most recently executed instruction.. For example, if decrementing a register produces zero value, the zero flag ZF is set by the processor. (A programmer might say: zero condition has

occurred.) Each flag is a single bit in the flag register, EFLAGS.CPU Flags and Data Manipulation - c-  
jump: computer ... 4 It's a good programming practice to organize code so the expected case is  
executed without a jump since the actual jump takes longer to execute than falling through the  
test.
